

IN THE SPECIFICATION

Please amend the Specification as shown below, in which deleted terms are shown with strikethrough and added terms are shown with underscoring.

Please replace paragraph [037] with the following amended paragraph:

[037] The hydraulic motor M comprises a motor casing 30 which is connected to the transmission housing (HSG) to be fixed and held, a motor rolling member 35 which is in sliding contact with a support spherical face 30a 30b formed on the inner wall of the motor casing 30 and supported such that it can turn with the center O extending in a direction (vertical direction to the sheet of the figure) perpendicular to the center axis of the transmission output shaft 6 as the center, a motor swash plate member 31 supported in the motor rolling member 35 such that it can turn by bearings 31a and 31b, a motor cylinder 32 opposed to the motor swash plate member 31, and a plurality of motor plungers 33 which are slidably laid in a plurality of motor plunger holes 32a formed in the axial direction and arranged in a loop surrounding the center axis of the motor cylinder 32. The motor cylinder 32 is supported in the motor casing 30 by a bearing 32c such that it can turn.
